

Mandatory Assignment

Table of content

1	Initialize port A as an output. Send 0xAA to port A.....	1
2	Set bit 4 in ddra with out disturbing the remaining bits.	1
3	Clear bit 3 in ddrb without disturbing the remaining bits.	1
4	Set bit 1,3,5 and 7 in DDRA without disturbing the remaining bits.....	1
5	Clear bit 0, 1, 2 and 3 in DDRA without disturbing the remaining bits.....	1
6	A switch is placed on PA3. If it is set then multiply r16 and r17 and send the result to portb (most significant byte) and portc (least significant byte). If PA3 is cleared add r16 and r17 and send the result to portb.	1
7	Make a multiplier function using VIA calling convetion	1

- 1 Initialize port A as an output. Send 0xAA to port A**
- 2 Set bit 4 in ddra with out disturbing the remaining bits.**
- 3 Clear bit 3 in ddrb without disturbing the remaining bits.**

Solution

```
Cbi ddrb, 3
```

- 4 Set bit 1,3,5 and 7 in DDRA without disturbing the remaining bits.**
- 5 Clear bit 0, 1, 2 and 3 in DDRA without disturbing the remaining bits.**
- 6 A switch is placed on PA3. If it is set then multiply r16 and r17 and send the result to portb (most significant byte) and portc (least significant byte). If PA3 is cleared add r16 and r17 and send the result to portb.**
- 7 Make a multiplier function using VIA calling convention**
